HemCon Receives CE Marking for ChitoFlex Hemorrhage Control Bandage

Certification Will Allow Expanded Presence into International Markets

PORTLAND, OR – January 2, 2007 – HemCon Medical Technologies, Inc. has received the European Union CE marking for its unique hemorrhage control ChitoFlex bandage. With receipt of this certification, HemCon is positioned to increase distribution into countries requiring the CE marking including: Great Britain, Germany and the rest of the EU.

The ChitoFlex bandage uses the same materials and technology as the HemCon hemorrhage control bandage that has been documented to have help save over 100 lives in Iraq and Afghanistan. ChitoFlex is a 3” x 28” strip of flexible chitosan that is designed to be stuffed into wounds that cannot be addressed by conventional methods.

“ChitoFlex was conceived and introduced in response to requests by the U.S. Military. It has already proven safe and effective in controlling severe battlefield hemorrhage.” stated HemCon, Inc. President and Chief Executive Officer John W. Morgan. “This product is the platform for many new applications in civilian markets. The CE mark will now allow us to bring this life saving product to the international community.”

About HemCon Medical Technologies, Inc.

HemCon Medical Technologies, Inc., founded in 2001, develops, manufactures, and markets innovative technologies to control bleeding and infection resulting from trauma or surgery. HemCon products are designed for use by military and civilian first responders as well as medical professionals in hospital, dental and clinical settings where rapid control of bleeding is of critical importance. The HemCon® Bandage was developed in collaboration with the Oregon Medical Laser Center and Providence St. Vincent’s Hospital. HemCon’s manufacturing and corporate headquarters are located in Portland, Oregon.
