HemCon Receives CE Marking for Unique Dental Dressing

Certification Will Allow Expanded Presence into International Markets

PORTLAND, OR – July 31, 2007 – HemCon Medical Technologies, Inc. has received the European Union CE marking for its unique dental dressing. Since the Dental Dressing's U.S. launch last year, international demand has been strong. With receipt of this certification, HemCon will be positioned to begin distributing into countries requiring the CE mark including: Great Britain, Germany and the rest of the EU.

The HemCon[®] Dental Dressing is designed to be used by oral surgeons and dentists following tooth extractions and other oral procedures. The dressing has also been used successfully to treat oral trauma. This dressing uses the same materials and technology as HemCon's other dressings which are used by the military and emergency medicine professionals to control severe bleeding.

"The HemCon Dental Dressing represents a significant advance in the standard of treating oral wounds," said John W. Morgan, HemCon President and Chief Executive Officer. "The CE mark will now allow us to increase our market presence to other key nations."

The HemCon Dental Dressing measures 10mm x 12mm and, when placed in an extraction socket, adheres to the surrounding tissue, protecting it and providing pain relief. The bandage is designed to dissolve within seven days.

"The HemCon Dental Dressing was very impressive during our testing," said Dr. Jay Malmquist, lead clinical investigator and former president of the American Association of Oral and Maxillofacial Surgeons. "The dressing provided protection of the wound site and sealed the wound in well under a minute in most cases, compared to about 15 minutes with gauze. The HemCon Dental Dressing also performed very well on patients who were on blood thinners."

About HemCon Medical Technologies, Inc.

HemCon Medical Technologies, Inc., founded in 2001, develops, manufactures, and markets innovative technologies to control bleeding and infection resulting from trauma or surgery. HemCon products are designed for use by military and civilian first responders as well as medical professionals in hospital, dental and clinical settings where rapid control of bleeding is of critical importance. The HemCon[®] Bandage was developed in collaboration with the Oregon Medical Laser Center and Providence St. Vincent's Hospital. HemCon's manufacturing and corporate headquarters are located in Portland, Oregon.
